Resources are stored and displayed in the Workbench in hierarchies. Described below are the terms used when referring to resources that are stored and displayed in a hierarchical structure.

Root
> The top level of the Workbench contents (in the file system).

Parent resource
> Any resource that contains another resource. Only projects and folders can be parent resources.

Child resource
> Any resource that is contained within another resource. Only files and folders can be child resources.

Resource hierarchies are displayed in the   , which is one of the default views in the
                              .
