Discussions on ACTF enhancements

- Divide visualization functions into appropriate sets of APIs
 - Reaching time estimation
 - Accessibility evaluation and rating
 - etc.
- Possible new use-case
 - The Empirical Investigation of Visual Aesthetics and Accessibility (EIVAA) project (<http://wel.cs.manchester.ac.uk/research/eivaa/>)
 - Seeks to investigate the interplay between visual aesthetics and accessibility in the context of the World Wide Web (Web).
 - The aim of the project is to develop a framework that is capable of computationally predicting the aesthetic quality of Web pages, and relaying associated accessibility implications to the designer.
- Internationalization(I18N)
 - Chinese (zn) translation is almost done. (Thanks, Shaojian!) bug [329477]
 - We will keep it in ACTF CVS for a while, and will contribute it to Babel.
 - Future work item: Customization of reaching time estimation algorithm.
- Other discussions?

Thank you!
