

ACTF Project Status Update

Jan. 22nd, 2010

Kentarou Fukuda, IBM

Agenda

- ACTF restructuring
 - ◆ <http://dev.eclipse.org/mhonarc/lists/actf-dev/msg00271.html>
- Visual Complexity Rankings and Accessibility Metrics (ViCRAM) tool status update
- MobileOK integration status update
- Helios (Eclipse 3.6) release status update
- Alternative Interface part development plan
- Other discussions

ACTF restructure

- Background

- ◆ Due to recent resource limitations, etc., the main contributor of the validation part (IBM Human Ability and Accessibility Center (HA&AC) team) will no longer actively participate in this project.
- ◆ This makes it difficult to ensure development/release of the validation part.
- ◆ Currently, the validation part has no downstream dependencies or consumers.

- Proposal

- ◆ Remove the Validation components from the Eclipse CVS repository.
 - This includes Java Validation Componentry (Javaco), Web Validation Componentry (Webelo), and Accessibility Probe (AccProbe, RCP application).^{*1}
 - Any plugins or resources that are shared with other ACTF components will remain in the Eclipse CVS repository.
 - See [actf-eclipse.html](#) for more details.
- ◆ Move previously released materials of validation part into “archive download page” with notices that they are no longer actively developed or supported.
- ◆ ACTF community will make decisions about these components’ future reactivation or enhancement.

Helios (Eclipse 3.6) release schedule

<http://wiki.eclipse.org/Helios>

• Schedule

- ◆ **M1** 8/19/2009 (= Galileo SR1 RC1)
- ◆ **M2** 9/30/2009 (= Galileo SR1)
- ◆ **M3** 11/11/2009
- ◆ **M4** 12/16/2009
- ◆ **M5** 2/3/2010 (= Galileo SR2)
- ◆ **M6** 3/17/2010
- ◆ **M7** 5/5/2010 (Feature Freeze)
- ◆ **RC1** 5/19/2010
- ◆ **RC2** 5/26/2010
- ◆ **RC3** 6/2/2010 (API Freeze)
- ◆ **RC4** 6/9/2010
- ◆ **Final** 6/16/2010

• Work items

- ◆ WCAG 2.0 support
 - initial support is done
- ◆ Performance improvement
 - blind usability visualization
- ◆ Usability improvements
- ◆ Advance integration with WST/PDT, etc.
- ◆ Bug fix

- ◆ New features?

milestone release is available at

<http://download.eclipse.org/technology/actf/0.8/milestones/>

Alternative Interface part development plan

- Plan to join 2011 annual release.
- Work items
 - ◆ Documentation (incl. Javadoc, Help, etc.)
 - ◆ API improvements/enhancements
 - ◆ Usability improvements
 - ◆ Bug fixes
- Focus
 - ◆ Develop a common platform of synthesized audio description for online videos

Audio Descriptions in Japan

Movie

448

54

4

Number of Japanese movies
(2008)

With Captions

With audio descriptions

from NPO Media Access Support Center

TV

0.4%

Ratio of TV programs with audio descriptions in Japan (except public broadcasting) (2008)

from NICT: National Institute of Information and Communications Technology

Internet

0.2%

Ratio of OpenCourseWare
(educational content) with **Captions.**

0.0%

Ratio of online movies with audio
descriptions in major online movie site and
educational content.)

from sampling investigation by IBM Research - Tokyo

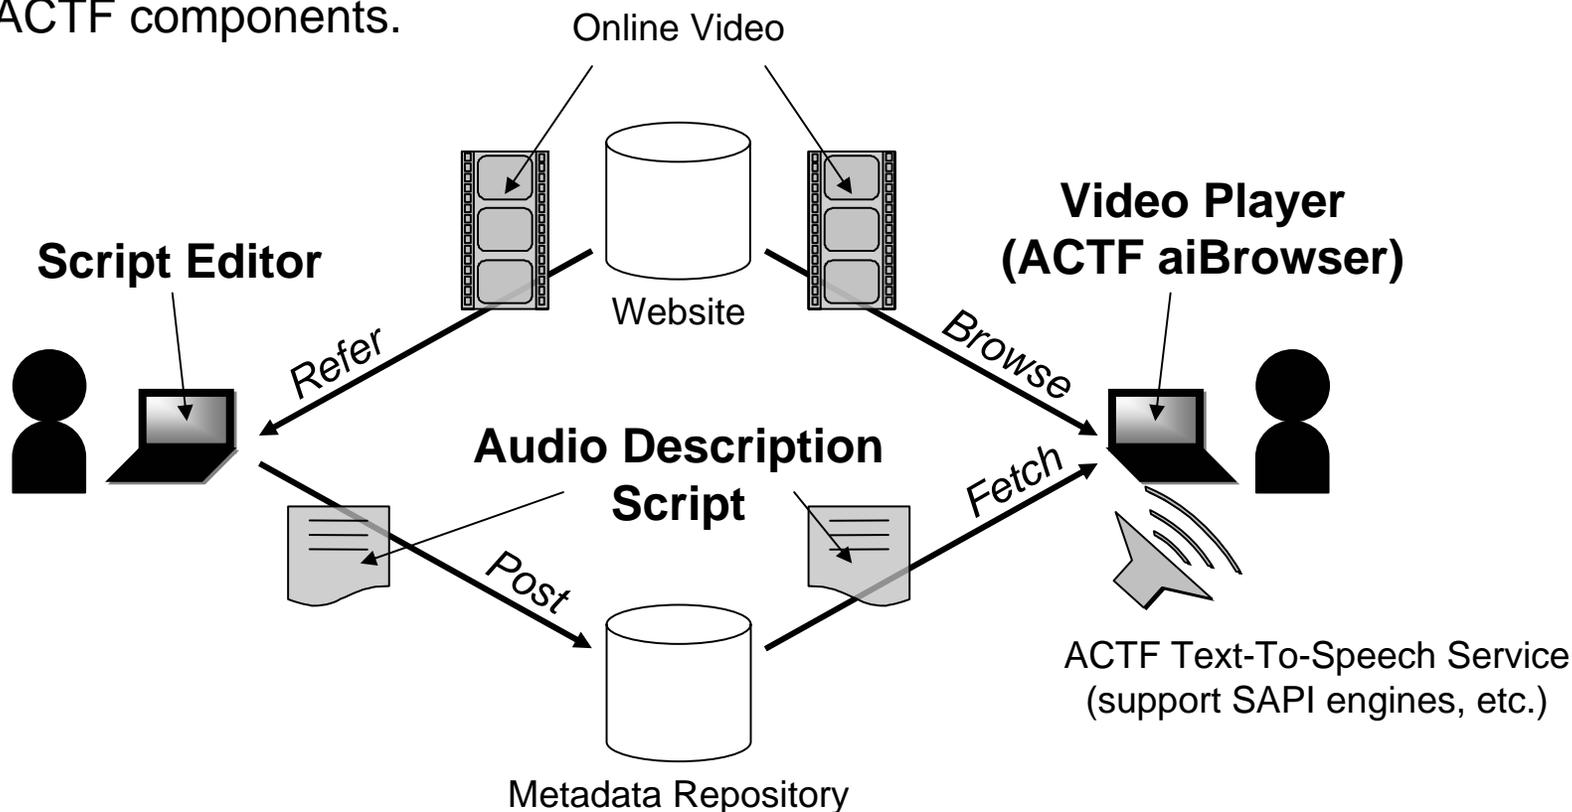

Issue - Cost

1. Writing an audio description script requires special expertise to describe the scenes between dialogues and scene changes.
2. Recording an audio description calls for a skilled narrator and a good recording environment.

Approach

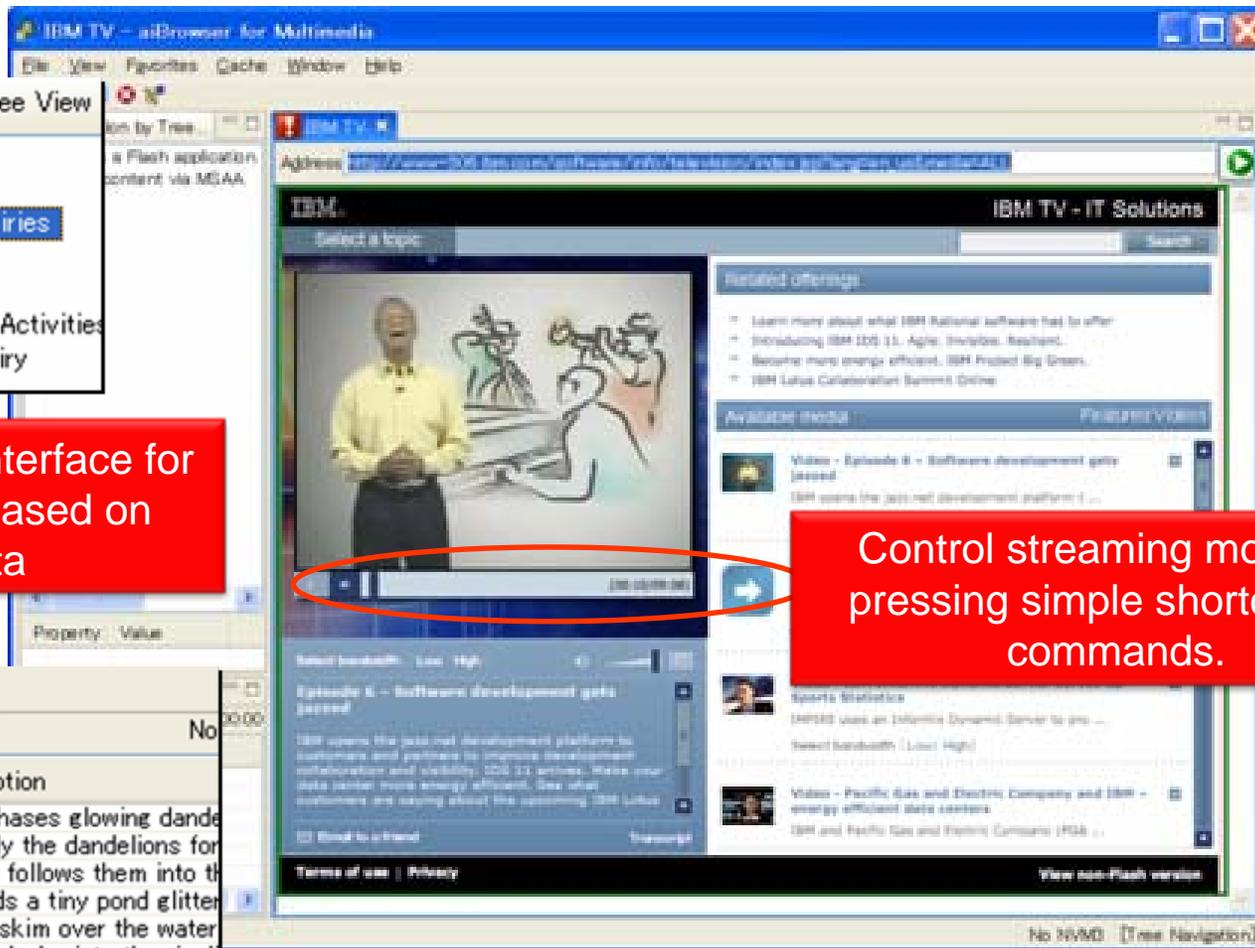

- Make ACTF into an open source platform for audio descriptions.
 - ◆ Enhance ACTF alternative interface components to enable authoring and playing (synthesizing) audio descriptions on PCs
 - ◆ Develop/enhance prototype tools (Script Editor and Video Player) on top of ACTF components.

ACTF aiBrowser

- <http://www.eclipse.org/actf/downloads/tools/aiBrowser/index.php>

Simplified user interface for voice access based on metadata

Control streaming movie by pressing simple shortcut key commands.

XML Audio description

Current status of aiBrowser

- Support media
 - ◆ Flash (swf v6-v9 (AS2))
 - ◆ Experimental: Windows Media (wmv, etc.), RealMedia, QuickTime
- Media control functions
 - ◆ Play / Stop / Pause Ctrl+P / Ctrl+S / Pause
 - ◆ Volume Down / Up Ctrl+J / Ctrl+K
 - ◆ Mute / Mute off Ctrl+M
 - ◆ Speed Up / Down Ctrl+Up / Ctrl+Down
 - ◆ Rewind / Forward Ctrl+Left / Ctrl+Right
- Audio description
 - ◆ Provide audio description by using TTS engine (SAPI, ProTalker)
 - ◆ Support simple XML format
 - start time
 - text

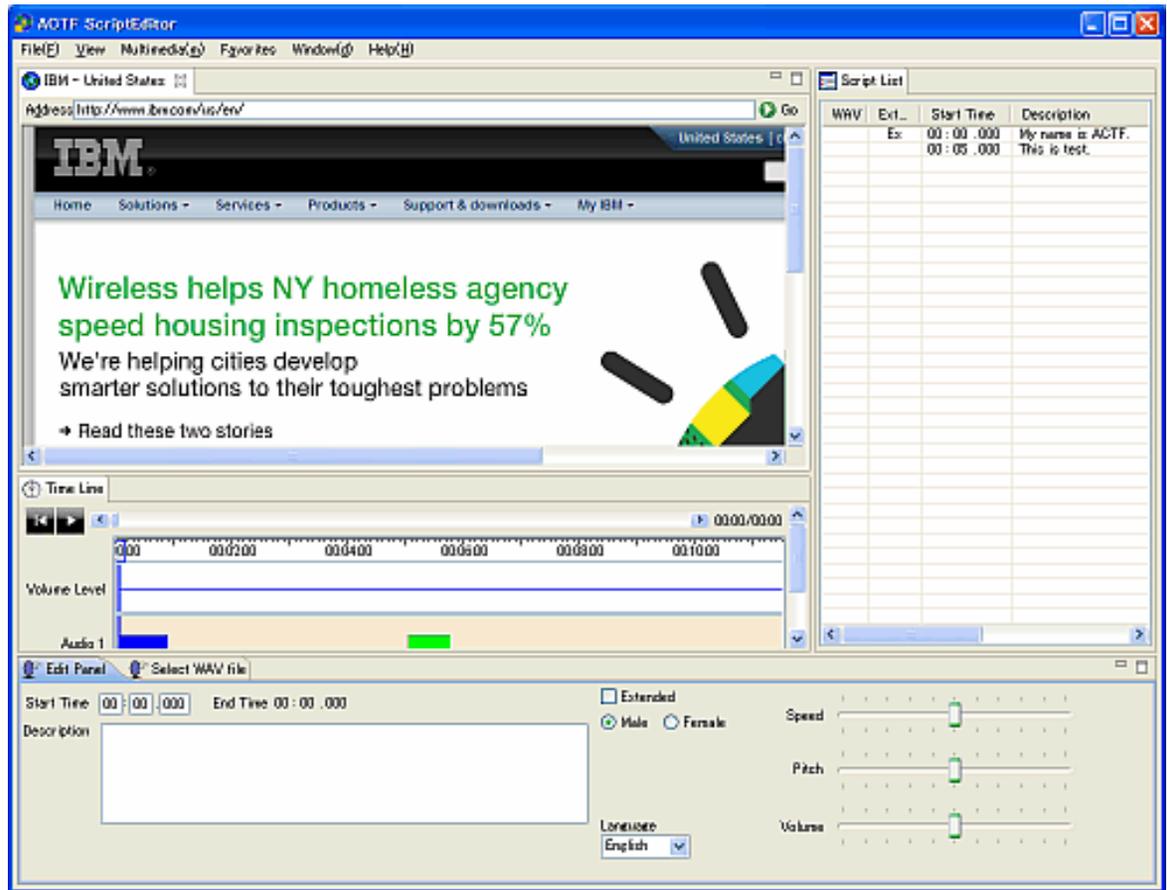

Enhancement plan

- Enable sharing of audio description scripts via networks
 - ◆ provide HTTP-based fetch mechanism
- Enable use of pre-generated audio descriptions (wav, mp3, etc.)
- Enable control of TTS parameters (voice gender, speed, pitch, stress, etc.) for providing high-quality audio descriptions
 - ◆ extend TTS control interface of ACTF
 - ◆ provide adapters for existing TTS engines/APIs (SSML, SAPI, etc.)
- Support extended audio description
- Support existing/coming formats for captions and audio descriptions
 - ◆ design common interface
 - ◆ provide ExtensionPoint to add adapters for each format

Script Editor (design image)

- Adopt commonly-used UI and make these views reusable components.
- Provide APIs to export/read Audio Description Scripts in XML, CSV, etc.
