1. ORGA-177 Investigate various options for hosting the CI environment

Splitting the requirements into a 24/7 demo environment and an on demand accessible CI environment only the latter one shall be set up by now.

Therefore our new openMDM Toolkit manager Angelika Wittek asks itemis for their formerly built docker containers an tries to install them on cloud vendor (Google Cloud Platform or AWS).

A single docker container instance includes the whole set of OracleDB, Filestorage and ODS-Server to start in a simple way.

Jenkins CI including Sonar will be set up on eclipse and is not part of the cloud solution. Franz-Josef Basler made a set up in the past for MDMWeb and checks if the instance can be used for the complete openMDM environment. If not he orders the setup of a new instance including Sonar.
